Resumen

En el presente trabajo se propone diseñar un demodulador de FM basado en PLL para demodular una señal FSK.

1. Esquemático del circuito

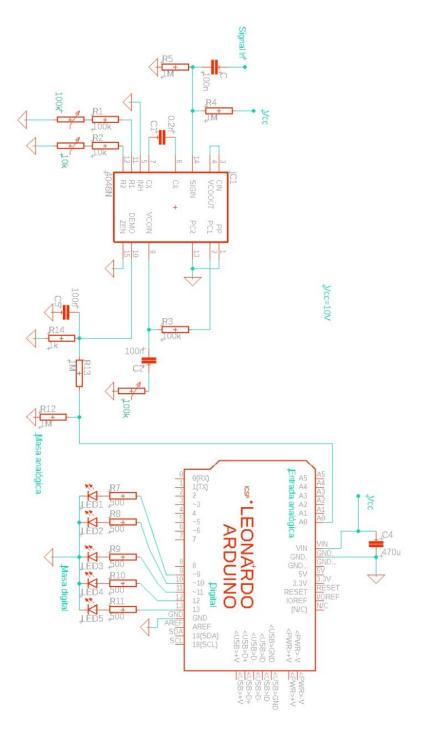

Figura 1: Esquemático del circuito.

2. Lista de Componentes

Componente	Valor	Cantidad
Capacitor cerámico	100nF	3
Capacitor cerámico	1nF	5
Capacitor electrolítico	470uF	1
Resistor 1/4 W	$1M\Omega$	4
Resistor 1/4 W	$1k\Omega$	11
Resistor 1/4 W	$100k\Omega$	2
Preset	$100k\Omega$	2
Preset	$10k\Omega$	1
LED ROJ0	_	2
LED AMARILLO	_	1
LED VERDE	_	2
CD 4046	_	1
ARDUINO LEONARDO	_	1
Cables Dupont		20
Fuente de alimentación	10V	1

Tabla 1: Lista de Componentes.

3. Mediciones

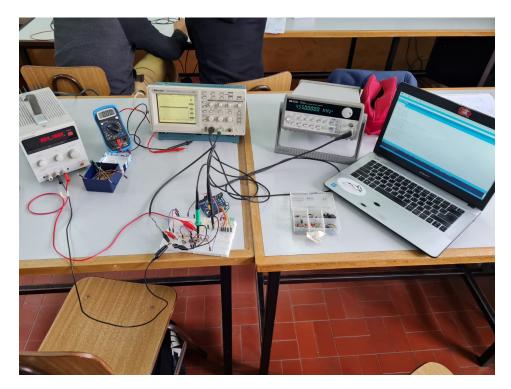

Figura 2: Banco de Medición.

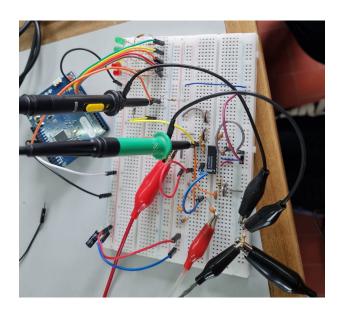

Figura 3: Mediciones.

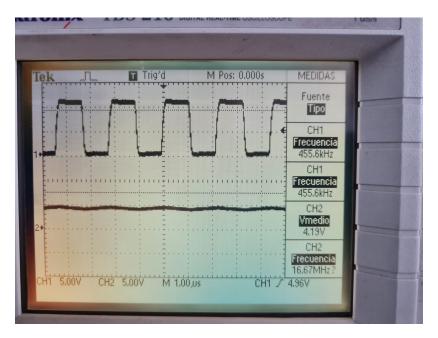

Figura 4: Frecuencia de oscilación libre y tensión de salida.

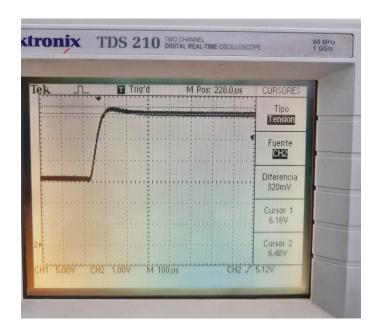

Figura 5: Respuesta al impulso.

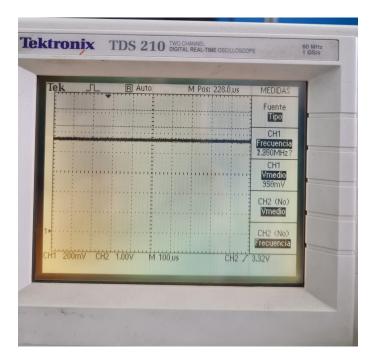

Figura 6: Primer nivel a 445 kHz (luego del divisor resistivo).

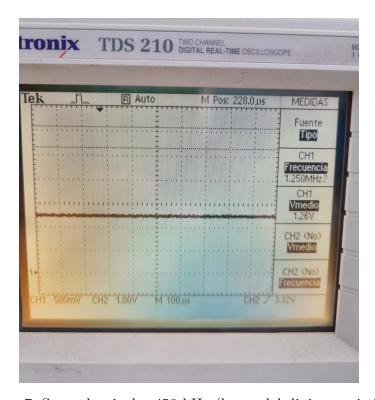

Figura 7: Segundo nivel a 450 kHz (luego del divisor resistivo).

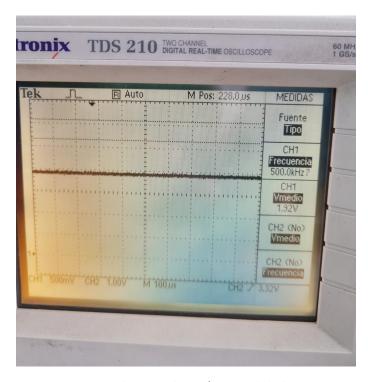

Figura 8: Tercer nivel a 455 kHz (luego del divisor resistivo).

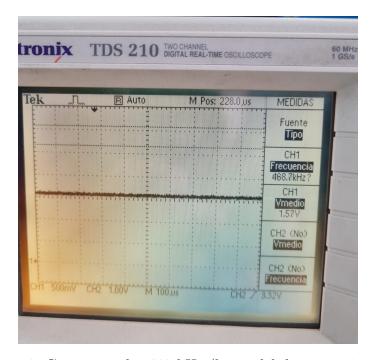

Figura 9: Cuarto nivel a 460 kHz (luego del divisor resistivo).

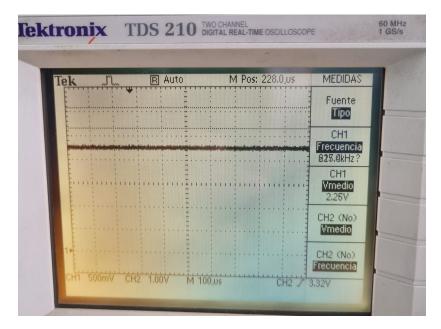

Figura 10: Quinto nivel a 465 kHz (luego del divisor resistivo).

4. Código Arduino

```
1 int analogPin = A0; // potentiometer wiper (middle terminal) connected to analog
       pin 3
                       // outside leads to ground and +5V
3 uint32_t val; // variable to store the value read
5 void setup() {
    Serial. begin (9600);
                                    // setup serial
    pinMode(13, OUTPUT);
    pinMode(12, OUTPUT);
    pinMode(11, OUTPUT);
    pinMode(10, OUTPUT);
10
    pinMode(9, OUTPUT);
11
12 }
13
14 void loop() {
    val = analogRead(analogPin); // read the input pin
16
    Serial. println (val);
                                    // debug value
17
    Serial. println (((float)val/1023)*5);
18
    delay (10);
19
20
    if (val >= 100 \&\& val < 170) // val entre 0,75 v y 1,1 v
21
22
      digitalWrite(13, HIGH);
23
      digitalWrite (12,LOW);
24
      digitalWrite(11, LOW);
25
      digitalWrite(10, LOW);
      digitalWrite (9, LOW);
29
      if (val >= 200 \&\& val < 280)
                                     // val entre 1,1 v v 1,4 v
31
32
      digitalWrite (13, LOW);
      digitalWrite (12, HIGH);
33
      digitalWrite(11, LOW);
34
      digitalWrite (10, LOW);
      digitalWrite (9, LOW);
36
37
38
        if (val >290 && val <350)
                                     // val entre 1,4 v y 1.7 v
39
40
      digitalWrite (13, LOW);
41
      digitalWrite (12,LOW);
42
      digitalWrite(11, HIGH);
      digitalWrite(10, LOW);
44
      digitalWrite (9, LOW);
46
47
        if (val >= 355 \&\& val < 430) // val entre 1.7 v y 2,1 v
48
49
      digitalWrite (13, LOW);
50
      digitalWrite (12,LOW);
51
      digitalWrite(11, LOW);
52
```

```
digitalWrite (10, HIGH);
53
                                digitalWrite (9, LOW);
55
56
                                           if (val >= 435 \&\& val < 512)
                                                                                                                                                                                                                    // val entre 2,1 v y 2.5 v
57
58
